WHAT IS SCAD?

SCAD strikes without warning when a tear occurs within the layers of an artery to the heart or from a bleed within the artery wall (intramural hematoma). Both block blood flow to the heart and can cause a heart attack. Most people have never heard of SCAD until it changes someone's life forever.

- #1 cause of heart attacks among women under the age of 50, new mothers and pregnant women.
- More than 90% of SCAD heart attacks occur in women.
- The average age of a SCAD patient is 47 years.
- Those impacted have few traditional risk factors of heart disease.
- SCAD can reoccur at anytime.

HOW WILL YOUR SPONSORSHIP HELP?

- Funds the most promising SCAD research.
- Supports awareness and education.
- Helps to strengthen and support survivors and families affected by SCAD.

We invite you to partner with us in making a meaningful difference.
